

# Enter a deed

To enter a birth, marriage, death or other certificate, several solutions are offered to you to enter it.

Either it is one of several certificates that you have retrieved, or it is an extract of a statement containing all the certificates of a municipality.

In the first case, you will tend to want to use one of the three editors of Ancestris: [Cygnus](#), [Aries](#) or [Gedcom](#).

In this situation, you will decipher the deed, extract the data from the record yourself and enter it into one of the editors.

You may also want to use the [Registers records](#), especially if the deed is part of a statement.

In this case, you will decipher the deed, but type it in along the flow, almost in the order it appears, and Ancestris will then allow you to ["move" it where you need it using drag-n-drop](#).
