# Ancestris

**Our ancestors have
so many stories to tell...**
Ancestris,
unlimited genealogy

Designed by volunteers passionate
about genealogy, Ancestris
is an open source genealogy software
respecting the Gedcom standard
and totally free.

Finding ones ancestors and bringing them back
to life, diving back into their time
and understanding our History
is a work of collective memory
that Ancestris teams have committed
to make accessible to all,
without restraint.

Since its creation in 1998, Ancestris,
manages every month more than
4 million ancestors, 1 million family stories,
a past going up
55 generations and one of the oldest
ancestors dating back to Merovech.
These are so many unlimited treasures in which
everyone will be able to dive again and again
with passion and emotion!

Manage your genealogy in complete freedom!

Free of cost and free of access, Ancestris lets you
keep your genealogy under control.
Your data is stored in a Gedcom file and
no genealogical data is hidden
in a file unreadable by other software.
Ancestris works on Windows, MacOS and Linux.

Ancestris helps you in your genealogy research
and can manage several genealogies at the same
time. Tree sharing allows you to automatically
find common ancestors with other Ancestris users
and to share information with them.

*Ancestris has all the great features of
genealogy software and more!*

A powerful software

Ancestris brings powerful features in addition to
traditional tools from other software.
With the Internet publication integrated into your site
in a very user-friendly navigation, your genealogy
can be spotted by cousins who will then be able to
help you in your research.

Classical and more sophisticated editors,
dynamic tree view, geographical view, chronological
view, list of places, sources and media,
varied genealogy statistics: Ancestris offers more
than 30 tools to manipulate your genealogy or
to do analyzes. You can even get a graphical
rendering of your tree to print it later on paper.

Ancestris is used across 30 countries
and supports 13 languages.

*Ancestris is the ideal tool to start your genealogy
or to migrate from another software.*

A community at your service

Ancestris takes into account your suggestions on a day-to-day basis. Feel free to suggest new features or improvements directly via the software. Genealogists or programmers will reply to you through the mailing list, chat (IRC channel), the Forum, Skype, or Twitter.

If you wish to, you can join the Ancestris team of developers, translators, or you can simply share your experience in the online help.

" Strict compliance with the Gedcom standard allows you to exchange genealogical data without error. "

Guillaume de Morant,
journalist in French Genealogy Review (RFG).
